cBRAIN

F2 for Country by Country Reporting (CbCR)

Functionality

The solution provided by cBrain is based on F2 Standard with a process layer/case guide made specifically for the CbCR notification details in combination with a self-service web form. The self-service will be integrated with your website, matching your branding criteria, and includes the ability to attach documents as evidence. The solution enables you to work on notification cases using the case guide (checklist) available in F2. A search template displays all relevant information for users. The implementation by cBrain includes testing and installation of infrastructure for web forms. Software licenses will cover extension of usage of F2.

Key Benefits

The automation of the digital workflow provided via cBrain's solution will facilitate processing work, save time and make reporting easier through a digital dashboard providing an overview of all notifications received by companies that need to report to your organization.

A significant increase in overall efficiency based on digitalization of workflows.

Software

F2 standard software with a self-service web form: creation from and integration with your organizational website, including the ability to attach documents as evidence and integration with F2.

Branding of web forms to match our customers' branding criteria.

Ability to add a spreadsheet to the self-service form and import the data in the spreadsheet to list fields in the form.

Case guide (checklist) creation and implementation in F2.

Creation of a search template to display all information for users.

Testing and installation of infrastructure for web forms.
Software licenses covering extension of usage of the F2 platform.

Project time
Project duration 1,5 month

About F2 and The Solution Gallery

F2 is like a Swiss Army Knife for government digitization. The standard software can support almost any type of organization, and process templates make it easy to reuse best practices and proven process solutions. F2 can be used just for a smaller department and without process configuration, it can be used for a specific process, or it can be implemented for the entire organization and multiple processes. A process template can be copied and reconfigured, and process templates thereby offer fast track and low-risk digitization. Working with many different customers and projects across countries, we have a build experience and a large library of process templates ready for reuse.

If you look to fast track to digitizing based on proven solutions, please have a look into our solution gallery and get inspired. Find a process template and have it re-configured for your specific requirements.

About cBrain

cBrain is listed at Nasdaq-OMX with offices in Europe, the USA, and the United Arab Emirates. In Denmark, which ranks number one in the global UN E-government index, we serve more than 50 government organizations and 2/3 of all Danish ministerial departments run their business on our software. We believe in a society based on democracy with digitization being the enablers for a new generation of strong, transparent, and efficient government institutions. Please see our CSR report and SDG 16 commitment to help to develop strong and accountable institutions.
